

Orthopedic Physical Assessment

Patient Name: Robert Smith, 38M

Date of Analysis: 2026-04-05

Chief Complaint

Acute pain in the right knee after a sports injury (Football).

Physical Exam

Swelling noted on the lateral aspect. Mild instability on the anterior drawer test. Range of motion limited to 90 degrees flexion.

Radiology

X-ray shows no fracture. MRI recommended to rule out ACL/Meniscus tear.

Management

RICE (Rest, Ice, Compression, Elevation). NSAIDs prescribed for pain relief.
